

Answers Week 2

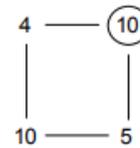

- 23** Here are the answers – and to explain how each one works, we've used a, b, c to stand for the three numbers you're given :

$$\text{answer} = a + b + c$$

$$\text{answer} = a + c + 2b$$

$$\text{answer} = ac - b$$

-
- 24** Before the grandfather arrives, there are 3 people in the house. Sam must have worked out their average age (32) by dividing the total of their ages by 3, so this total must have been $3 \times 32 = 96$.

Once the grandfather has arrived, there are 4 people in the house. If the average age of these 4 people is 42, the total of their ages must be 4×42 , which is 168.

Of course, it's grandfather who has increased the age total in the house from 96 to 168, so he must be 72 !

Problems of the Day 2020

Day 16

1 Here are 3 number patterns.

0	5	10	15	20	25	30
---	---	----	----	----	----	----

27	37	47	57	67	77	87
----	----	----	----	----	----	----

32	30	28	26	24	22	20
----	----	----	----	----	----	----

What is the sum of the three missing numbers?

$$25 + 47 + 24 = 96$$

2 Work out the value of each symbol.

$$\triangle q + \triangle q = 18$$

$$18 \div 2 = 9$$

$$\triangle q + \diamond 21 = 30$$

$$30 - 9 = 21$$

$$\star 31 - \diamond 21 = 10$$

$$21 + 10 = 31$$

Problems of the Day 2020

Day 16

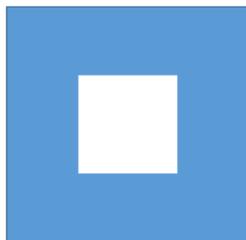

1 Yasmin has a large blue square piece of paper.

She cuts out a 4 cm x 4 cm square from the centre.

$$4 \times 4 = 16$$

$$16 + 65 = 81$$

$$81 = 9 \times 9$$

The area of the blue region is 65 cm².
What is the length of the large blue square? **The length is 9 cm.**

2 Work out the value of each symbol.

$$\triangle 52 + \star 33 + \diamond 15 = 100$$

$$\triangle 52 + \diamond 15 = 67$$

$$\star 33 - \diamond 15 = 18$$

$$100 - 67 = 33$$

$$33 - 18 = 15$$

$$67 - 15 = 52$$
